## 266GST and 266AST

# Gauge and absolute pressure transmitters

## Measurement made easy

Engineered solutions for all applications

## Base accuracy

• 0.04 % of calibrated span (optional 0.025 %)

# Proven sensor technology together with state-of-the-art digital technology

• Large turn down ratio of up to 100:1

## **Comprehensive selection of sensors**

Optimized performance and stability

## 10-year stability

• 0.15 % of URL

## Flexible configuration options

Local configuration via keys on LCD indicator

## TTG (Through-The-Glass) key technology

• Enables quick and easy local configuration without the need to open the cover - even in environments with explosion protection

## **IEC 61508 certification**

• For SIL2 (1001) and SIL3 (1002) applications

## Full compliance with Pressure Equipment Directive (PED) category III

Product in compliance with Directive 2011/65/UE (RoHS II)

## In-built advanced diagnostics

#### Span limits

Maximum span = URL

For optimum measuring accuracy, it is recommended that you select the sensor code which will provide the lowest TD value.

3

#### Zero position suppression and elevation

The zero position and span can be set to any value within the measuring range limits listed in the table if: - adjusted span  $\geq$  smallest span

#### Damping

Configurable time constant between 0 and 60 s. This is in addition to the sensor response time.

#### Turn On time

Ready for operation as per specifications in less than 10 s with minimum damping.

#### Insulation resistance

>100 M $\Omega$  at 500 V DC (between terminals and ground).

#### Limits for environmental effects

#### Electromagnetic compatibility (EMC)

Meets requirements of EN 61326 and Namur NE-21 (option) Overvoltage strength (with surge protection): 4 kV (in acc. with IEC 1000-4-5 EN 61000-4-5)

#### Pressure Equipment Directive (PED)

Meets requirements of Directive 2014/68/EU category III module H.

#### Humidity

Relative humidity: Up to 100 %. Condensation, icing: Permissible

#### Vibration resistance

Acceleration up to 2 g at frequencies of up to 1000 Hz (according to IEC 60068-2-6). Acceleration limited to 1 g for housing out of stainless steel.

#### Shock resistance

Acceleration: 50 g Duration: 11 ms (according to IEC 60068–2–27).

#### **IP** rating

In accordance with EN 60529, JIS C0920 The transmitter is dust and sand proof and protected against immersion effects.

## Specification - electrical data and options

## HART® digital communication and 4 to 20 mA output

#### Power supply

The transmitter operates from 10.5 to 42 V DC with no load and is protected against reversed polarity (additional loads enable operation above 42 V DC).

During use in Ex ia zones and in other intrinsically safe applications, the power supply must not exceed 30 V DC.

Minimum operating voltage		
12.3 V DC	Device with the option "S2 – overvoltage protection"	
10.8 V DC	Devices with the option "YE – NE21 conformity"	

#### Ripple

Max. 20 mV over a 250  $\Omega$  load as per HART specifications.

#### Load limitations

Total loop resistance at 4 to 20 mA and HART:

R (k $\Omega$ )=<u>Voltage supply</u>-<u>Minimum operating voltage (V DC)</u> 22 mA

A minimum resistance of 250  $\Omega$  is required for HART communication.

#### Surge protection (optional)

Up to  $4 \, kV$ 

- Voltage: 1.2 µs rise time / 50 µs delay time at half value
- Current: 8 µs rise time / 20 µs delay time at half value

#### **Output signal**

Two-wire output 4 – 20 mA, selectable by the operator: linear or square root output signal, characteristic curve with the exponents 3/2 or 5/2, square root for bidirectional flow, linearization table with 22 points (i.e. for level measurements in lateral, cylindric containers and spherical containers).

The HART communication provides the digital process variables which are superimposed on the 4 to 20 mA signal (protocol in accordance with Bell 202 FSK standard).

HART	protocol	

· · · · · · · · · · · · · · · · · · ·
HART revision 7 (standard, as default)
HART revision 5 (optional, on request)

#### Output current limits (in accordance with NAMUR standard) Overload condition

- Lower limit: 3.8 mA (configurable from 3.8 4 mA)
- Upper limit: 20.5 mA (configurable from 20 21 mA)

#### Alarm current

Adjustment range	
Minimum alarm current (low alarm	3.6 mA
current)	(configurable from 3.6 – 4 mA)
Maximum alarm current (high alarm	21 mA
current)	(configurable from 20 – 23 mA)
Maximum alarm current (high alarm current) for devices with "HART SIL – functional safety"	Limited to maximum 22 mA! (From electronic version 7.1.15)

#### Standard setting: high alarm current

#### **FOUNDATION Fieldbus™ output**

Model

Link Active Scheduler (LAS) capability implemented. Manufacturer code: 000320 (hex) Device type code: 0007 (hex)

#### Power supply

The transmitter operates from 9 to 32 V DC, regardless of polarity, with or without surge protection. During use in EEx ia zones, the power supply must not exceed 24 V DC (entity certification) or 17.5 V DC (FISCO certification) according to FF-816.

#### **Current consumption**

Operating (quiescent): 15 mA Fault current limit value: 20 mA max.

#### Output signal

Physical layer in accordance with IEC 11582 / EN 611582; transmission using Manchester II modulation at 31.25 kbit/s.

#### Function blocks/execution period

- 3 enhanced analog input blocks / 25 ms max. (each)
- 1 extended PID block / 40 ms max.
- 1 standard arithmetic block / 25 ms
- 1 standard input selector block / 25 ms
- 1 standard control selector block / 25 ms
- 1 standard signal characterization block / 25 ms
- 1 standard integrator / totalizer block / 25 ms

#### Additional blocks

- 1 enhanced resource block
- 1 manufacturer-specific pressure with calibration
- transducer block
- 1 manufacturer-specific advanced diagnostics transducer block
- 1 manufacturer-specific local display transducer block

#### Number of link objects

35

#### Number of VCRs

35

#### **Output interface**

FOUNDATION fieldbus digital communication protocol in accordance with standard H1, fulfills the specification V 1.7

#### Operating mode during transmitter mulfunction

The output signal will be "frozen" to the last value in case of significant transmitter interference, once this interference is detected by the self-diagnostics function (which also displays error states).

In the event of electronics failures or short circuits, the transmitter consumption is electronically limited to a defined value (approx. 20 mA) in order to ensure network safety.

## ...Specification - electrical data and options

#### **PROFIBUS PA output**

#### DeviceType

Pressure transmitter conform with profile 3.0.1 Indent number: 3450 (hex)

#### Power supply

The transmitter operates from 9 to 32 V DC, independent of the polarity with or without overvoltage protection. During use in EEx ia zones, the operating voltage must not exceed 17.5 V DC.

Intrinsically safe installation in accordance with the FISCO model.

#### Input Current

Operation (quiescent current): 15 mA Residual current limit value 20 mA maximum

#### Output signal

Physical layer in accordance with IEC 1158–2 / EN 61158–2, transmission with Manchester II modulation with 31.25 kBit/s.

#### **Output interface**

PROFIBUS PA communication in accordance with PROFIBUS DP 50170 part 2 / DIN 19245 part 1–3

#### Output cycle time

25 ms

#### Data blocks

- 1 "Physical Block"
- 3 "Analog Input" blocks
- 1 "Pressure Transducer Block" with calibration
- 1 "Transducer Block" local display

#### Operating mode during transmitter malfunction

In case of heavy transmitter errors, which are recognized by self-diagnosis, the output signal can be put into defined states, which can be chosen by the operator: safe, most recent or calculated value. In case of electronic errors or short-circuits, the current consumption is electronically limited to a set value

(approx. 20 mA) for the safety of the network.

The display can also be used to show static pressure, sensor temperature, and diagnosis notice, as well as make configuration settings.

## Integral LCD display with TTG-(Through-The-Glass) operation (code L5)

As with the integral LCD display above, but featuring an innovative TTG (Through–The–Glass) button technology which can be used to activate the device's configuration and management menus without having to remove the transmitter housing cover.

The TTG (Through–The–Glass) buttons are protected against accidental activation.

#### **Specification - measuring accuracy**

Reference conditions according to IEC 60770.

Ambient temperature 20 °C (68 °F), rel. humidity 65 %, atmospheric pressure 1013 hPa (1013 mbar), measuring span based on zero, separating diaphragms made from stainless steel AISI 316 L, or Hastelloy, silicone oil filling fluid, HART digital trim values equal to 4 and 20 mA span end points, linear characteristic.

Unless otherwise stated, errors are specified as a % of the span value.

Some measuring accuracy levels relating to the upper measuring range limit (URL) are affected by the current turn down (TD); i.e., the ratio of the upper measuring range limit to the set span.

FOR OPTIMUM MEASURING ACCURACY, IT IS RECOMMENDED THAT YOU SELECT THE SENSOR CODE WHICH WILL PROVIDE THE LOWEST TD VALUE.

#### Dynamic performance (according to IEC 61298-1)

Sensors	Time constant (63.2% of total step response)
Sensor C to V (all)	150 ms
Reaction time for all sensors	40 ms

Response time (total) = reaction time + time constant

#### ... Specification - measuring accuracy

#### Power supply

Within the limit values for the voltage / load, the total influence is less than 0.005 % of the upper measuring range limit per volt.

#### Load

Within the load / voltage limits, the total influence is negligible.

#### Electromagnetic field

Meets all requirements of EN 61326 and NAMUR NE-21.

#### Common-mode interference

No influence from 100 V rms @ 50 Hz, or 50 V DC

#### Mounting position

Rotations in the plane of the diaphragm have a negligible effect. A tilt from the vertical of up to 90° causes a zero point shift of up to 0.35 kPa (3.5 mbar, 1.4 inH2O), which can be corrected by making an appropriate zero position adjustment. There is no effect on the measuring span. In applications where a dynamic inclined installation is required (e.g. naval applications with maximum vessel inclination of +/-22.5°), the maximum error can be up to 0,5 mbar for 266GST and 2 mbar for 266AST.

Such error might be resulting in a deviation from the standard accuracy with percentual magnitude depending on the range of the selected device.

In case of non-dynamic inclined installations, this effect can be eliminated by performing a zero calibration in the field.

Please contact ABB to assess more in details on the installation effects

### Specification - configuration

## Transmitter with HART communication and 4 to 20 mA

#### Standard configuration

Transmitters are calibrated at the factory to the customer's specified measuring range. The calibrated range and measuring point number are provided on the name plate. If this data has not been specified, the transmitter will be delivered with the plate left blank and the following configuration:

Physical unit	kPa
4 mA	Zero
20 mA	Measuring range upper
	limit (URL)
Output	Linear
Damping	1 s
Transmitter interference mode	High alarm
Software tag	
(max. 8 characters)	Blank
Optional LCD display	PV in kPa; output in mA
	and in percent as
	bargraph

Any or all of the configurable parameters listed above including the lower and upper range values (with the same unit of measurement) - can easily be changed using a portable HART handheld communicator or a PC running the configuration software with the DTM for 266 models. Specifications concerning the flange type and materials, O-ring and vent / drain valve materials, and additional device options are stored in the transmitter database.

#### **Tag and Calibration**

Tag and/or specific calibrated span can be requested when configuring the device.

Two tag types are available: Short Tag and Long Tag. See below table for details about tag type applicability / presence:

Туре	Max Length	On Display	On Certification	On Device Label
Short Tag	8 digits	YES	YES	NO
Long Tag	32 digits	NO	YES	YES

In case no specific indication will be given about the tag type, data will be considered as Long Tag by default. In case tag is required on the optional wired-on customer data plate (optional digits I1, I3) specific indication needs to be given.

#### Customer-specific configuration (option N6)

The following information can be specified in addition to		
the standard configuration parameters:		
Description	16 alphanumeric	
	characters	
Supplementary information	32 alphanumeric	
	characters	
Date Day, month, year		

For the HART protocol, the following physical units are available for pressure measurements: Pa, kPa, MPa inH2O @ 4 °C, mmH2O @ 4 °C, psi inH2O @ 20 °C, ftH2O @ 20 °C, mmH2O @ 20 °C inHg, mmHg, Torr g/cm2, kg/cm2, atm mbar, bar These and others are available for PROFIBUS and FOUNDATION fieldbus.

#### Transmitter with PROFIBUS PA communication

#### Standard configuration

Transmitters are calibrated at the factory to the customer's specified measuring range. The calibrated range and measuring point number are provided on the name plate. If this data has not been specified, the transmitter will be delivered with the plate left blank and the following configuration:

## Transmitter with FOUNDATION fieldbus communication

#### Standard configuration

Transmitters are calibrated at the factory to the customer's specified measuring range. The calibrated range and measuring point number are provided on the name plate. If this data has not been specified, the transmitter will be delivered with the plate left blank and the analog input function block FB1 will be configured as follows:

Pressure Measuring profile Physical unit kPa Output scale 0 % Measuring range lower limit (LRL) Output scale 100 % Measuring range upper limit (URL) Output Linear Upper alarm limit Measuring range upper limit (URL) Upper warning limit Measuring range upper limit (URL) Lower warning limit Measuring range lower limit (LRL) Lower alarm limit Measuring range lower limit (LRL) Hysteresis limit value 0.5 % of output scaling PV filter time 0 s Measuring point tag 30 alphanumeric characters Optional LCD display PV in kPa; output in percent as bargraph display

The analog input function blocks FB2 and FB3 are each configured for the sensor temperature measured in °C and the static pressure measured in MPa. Any or all of the configurable parameters listed above - including the measuring range values - can easily be changed using a FOUNDATION fieldbus-compatible configuration tool. Specifications concerning the flange type and materials, O-ring and vent / drain valve materials, and additional device options are stored in the transmitter database.

## **Electrical connections**

#### **HART** version

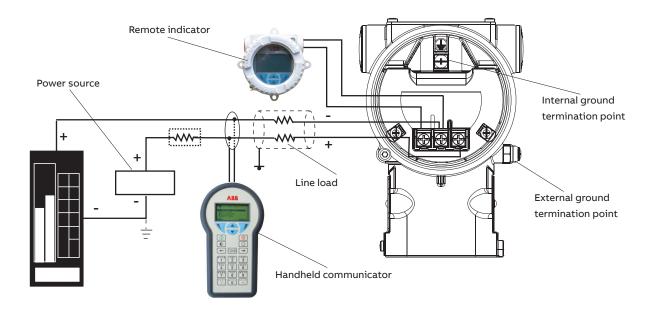

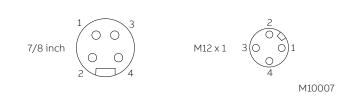

Figure 5 Electrical connection – HART Version

The HART handheld terminal can be connected to any wiring termination point in the loop as long as a minimum resistance of 250  $\Omega$  is present between handheld terminal and transmitter power supply. If it is less than 250  $\Omega$ , additional resistance wires must be installed to enable a communication.

Compliance with the NACE regulation is based on recommendations MR0175 / ISO 15156. Additionally, stainless steel AISI 316, AISI 316L and Hastelloy C-276 automatically meet the criteria of MR0103, provided that they also meet the criteria of MR0175.

#### Standard delivery scope (changes possible with additional ordering code)

- For standard applications (without explosion protection)
- No display, no mounting bracket, no surge protection
- Multilanguage short-form operating instruction and English labeling
- Configuration with kPa and °C units
- No test, inspection, or material certificates

Unless otherwise specified prior to manufacture, the customer shall be responsible for selecting suitable wetted parts and an appropriate filling fluid in order to ensure compatibility with the measuring fluid.

Compliance with the NACE regulation is based on recommendations MR0175 / ISO 15156. Additionally, stainless steel AISI 316, AISI 316L and Hastelloy C-276 automatically meet the criteria of MR0103, provided that they also meet the criteria of MR0175.
